Connect the website

HappyHands | **Northstar** / Connect the website — Storyboard concept · Local workflow

Connect your website

Start with your website.

Bring the page, its repository and the task you want to review.

Website URL

http://localhost:4321/

Local repository

~/Projects/northstar

Source access is confirmed locally.

Review task

Explore projects and send an enquiry

Design sources

```
DESIGN.md
src/styles/tokens.css
src/components/
```

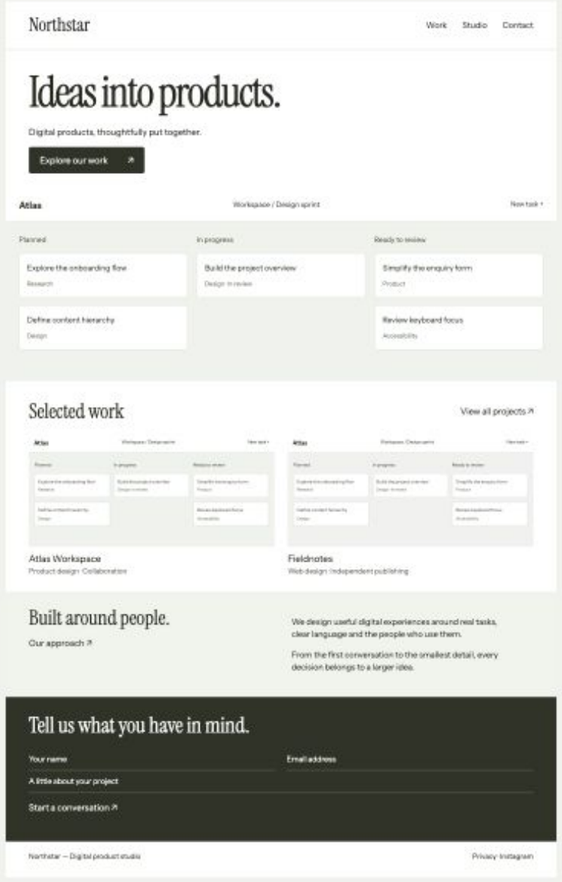

Confirm & start analysis

Capture scope is reviewed before execution.

Website preview

Northstar · Demo project

Desktop · Complete page — 1280 px

Phone · 390 × 844

Start with your website.

Illustrative UI · Fictional project · Not a live execution

What happens

Enter the page URL, confirm local repository access and supply design sources. Show the complete Northstar page beside the connection form, plus its phone view.

Camera & transition

Hold a straight-on full application frame. Track the URL entry, then reveal the full page without perspective distortion. The page stays fixed as the analysis panel replaces the form.

Voiceover draft

Start with your website. Connect its repository and design sources, then confirm what the local workbench should review.

Analyze the whole page

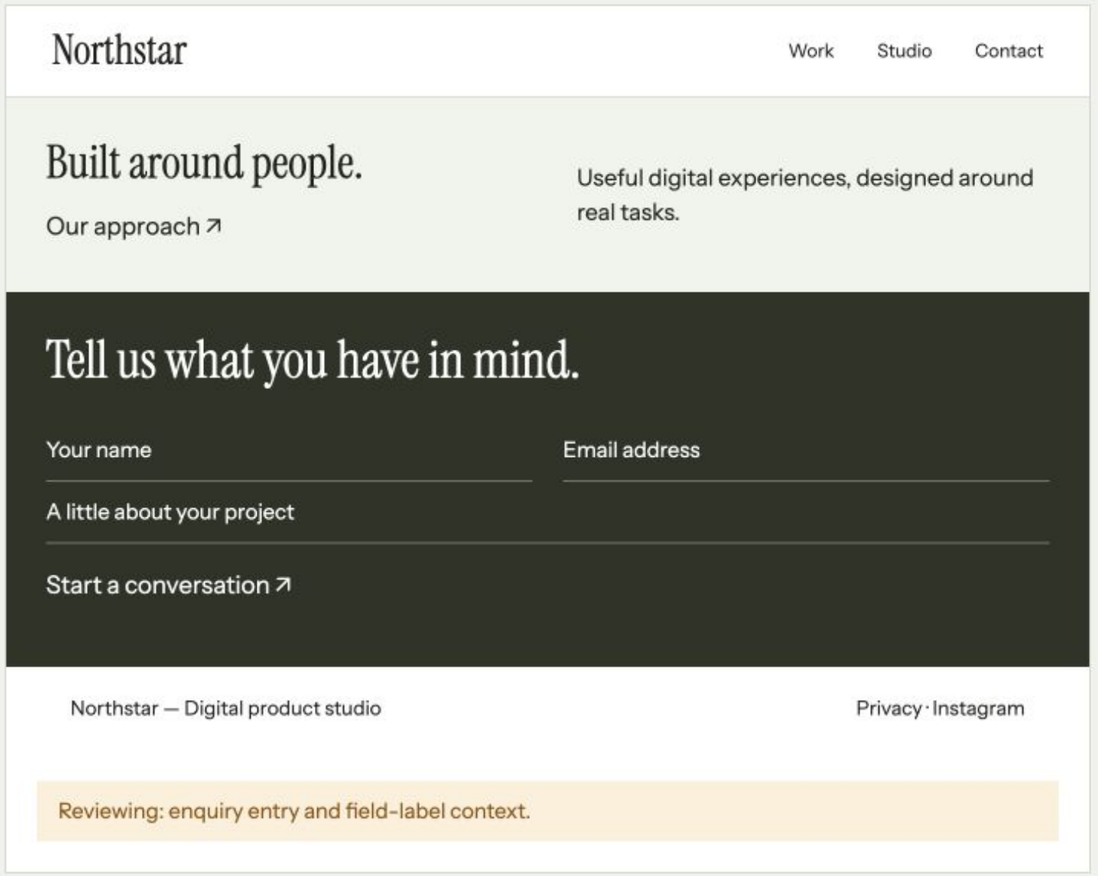

Full-page coverage

Desktop

Inspecting the page

Contact region

Review details

Northstar

Follow the analysis.

Layout, content hierarchy, spacing and declared interactions.

Desktop full page	**Captured**
Phone full page	**Captured**
Component sources	**Inventoried**
Enquiry entry state	**Reviewing**

Candidate issues

Intro action spacing
Check the gap against the project token.

Project link labels
Check source and rendered context.

Contact field labels
Inspect labels in the enquiry state.

Illustrative capture plan · Unseen routes remain unverified.

See the whole experience.

Illustrative UI · Fictional project · Not a live execution

What happens

Show the full-page overview from navigation through contact. Surface desktop and phone capture coverage and the declared enquiry interaction being reviewed.

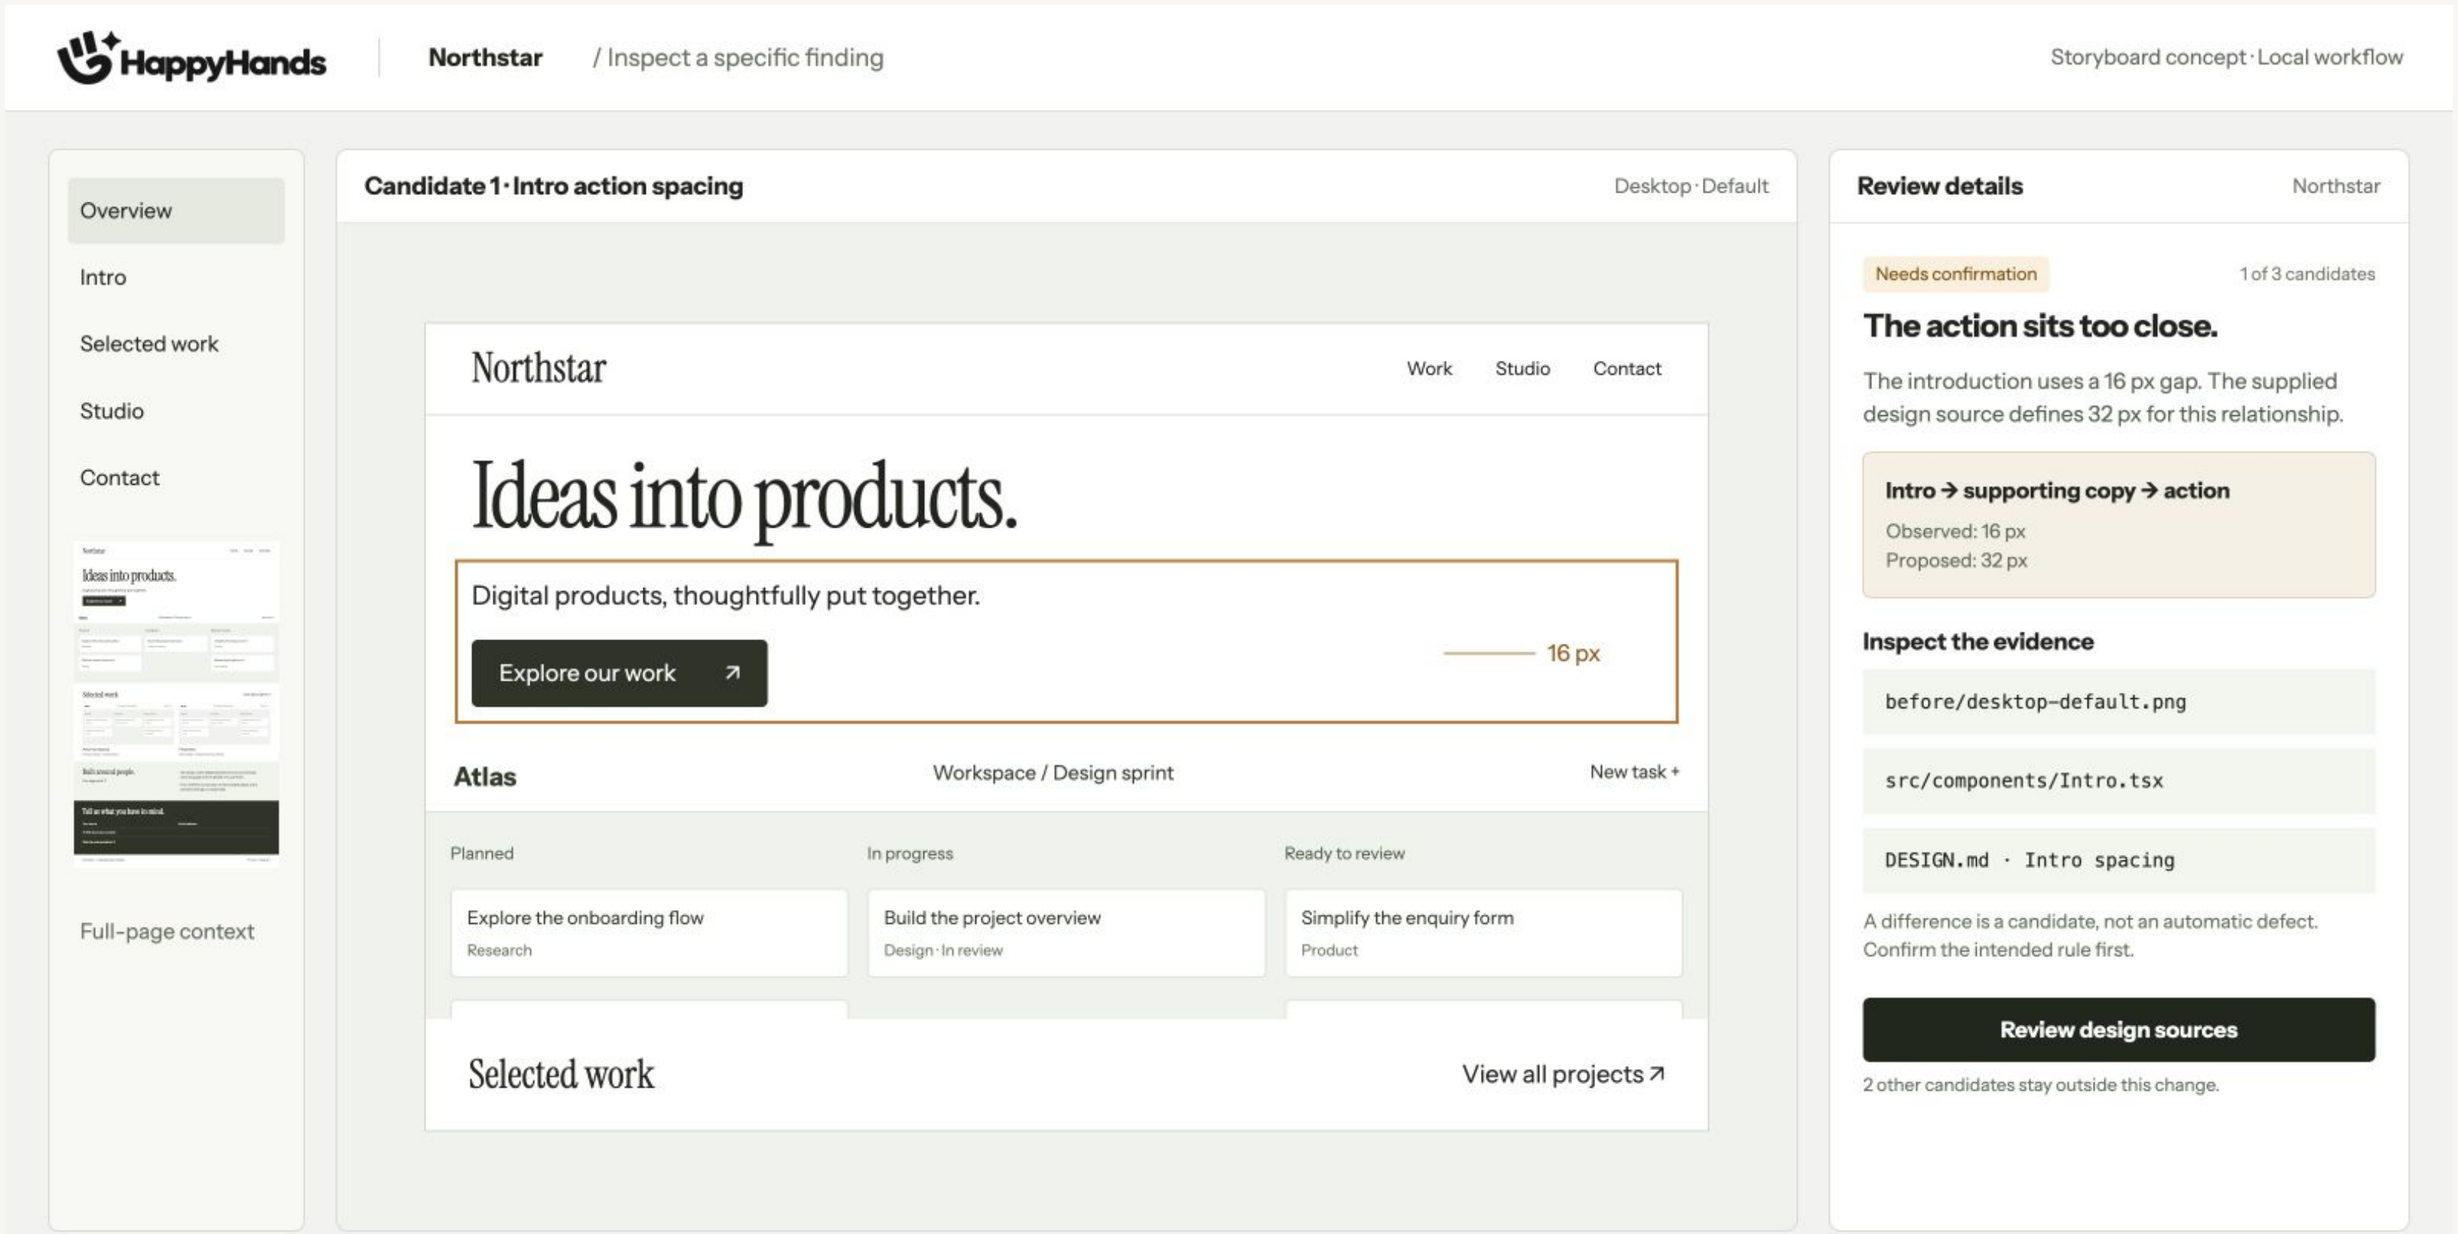

Camera & transition

Move down the page with a stable miniature overview. Keep the current region and analysis state visible together. An analysis candidate anchors the next zoom to the Intro region.

Voiceover draft

Follow the page from top to bottom. Review layout, content hierarchy, spacing and planned interactions, with the checked scope always visible.

Inspect a specific finding

Find what needs attention.

Illustrative UI · Fictional project · Not a live execution

What happens

Select candidate 1. Highlight the copy-to-action relationship and show its screenshot, component source and design guidance. Keep the full-page navigator visible.

Camera & transition

Move closer to the selected component without losing the page locator. Hold the observed 16 px value next to the proposed rule. Follow the source reference into the design-system view.

Voiceover draft

Open a candidate and see where it occurs, what was observed and which source supports the proposed change. Confirm the intent before treating it as a defect.

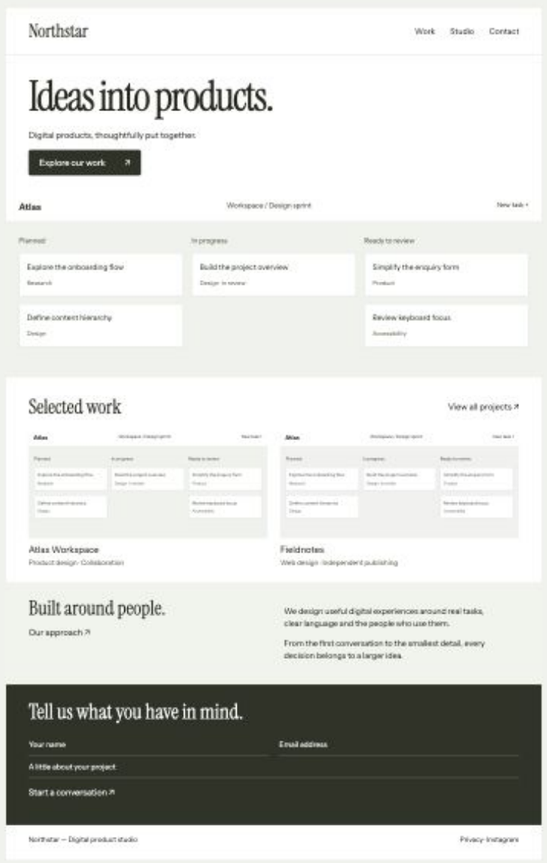

Read the design system

HappyHands | **Northstar** / Read the design system

Canvas · #FFFFFF

Ink · #303328

`space.4`	16 px
`space.8`	32 px
`radius.control`	4 px

Review details

Northstar

Awaiting approval

Foundation v1

Proposed constraints, linked to their project sources.

Design guidance

```
DESIGN.md
Intro / copy-to-action: 32 px
```

Style tokens

```
src/styles/tokens.css
--space-8: 32px;
```

Component source

```
src/components/Intro.tsx
```

Approve selected constraints

Approval defines constraints. It does not start a code change.

Understand your design system.

Illustrative UI · Fictional project · Not a live execution

What happens

Show type, colors and spacing alongside the complete page and actual named source paths. Review selected Foundation constraints before approving them.

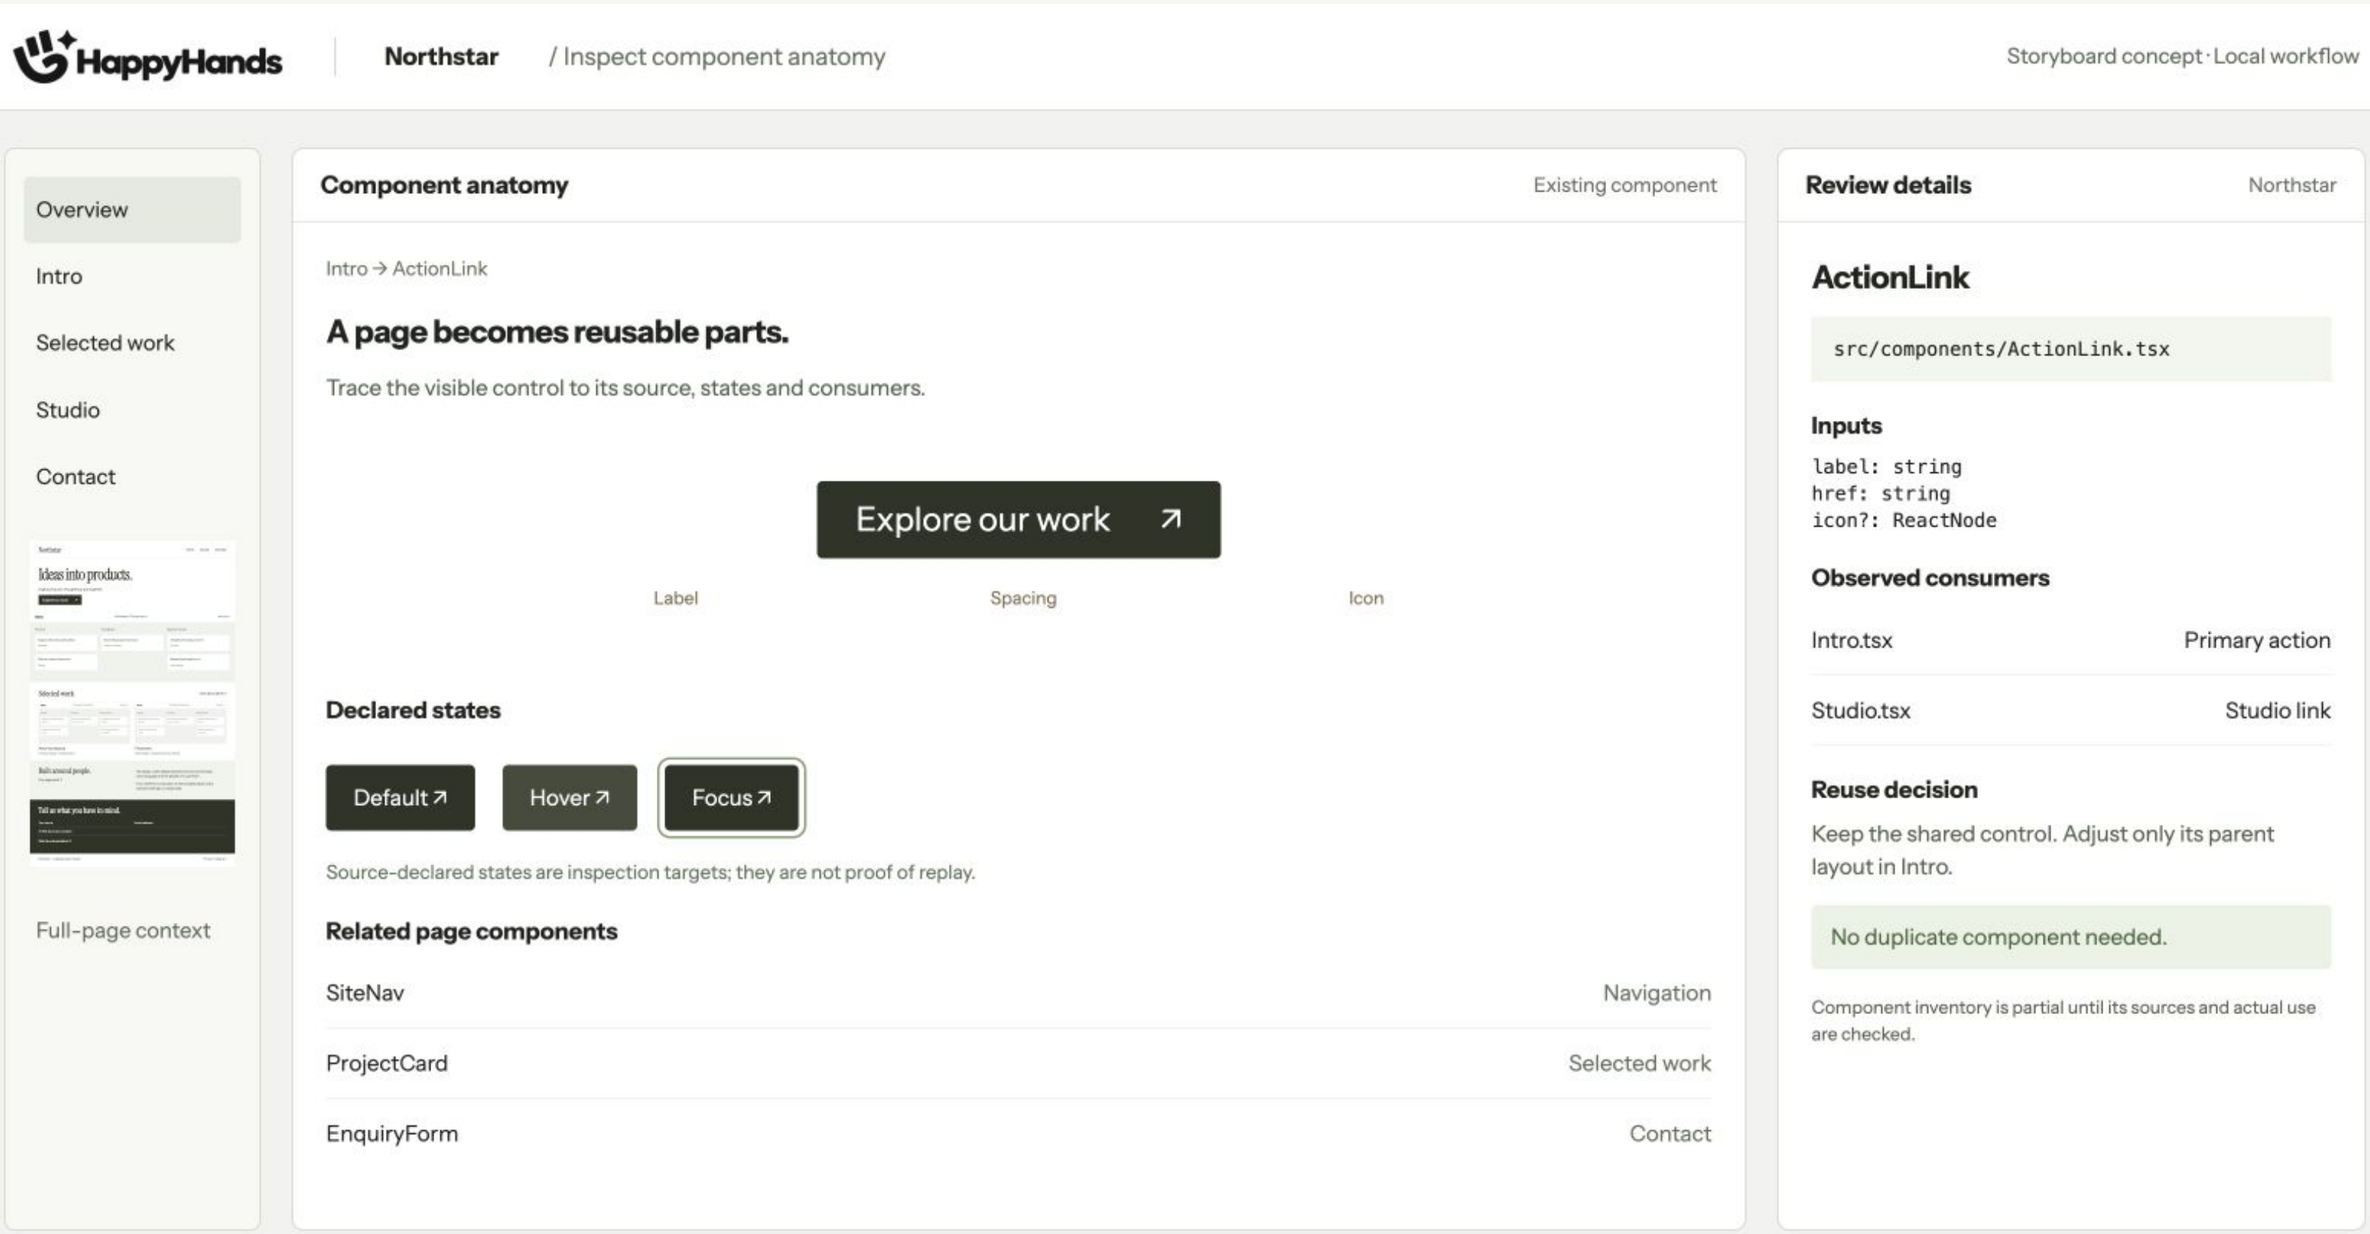

Camera & transition

Keep three connected surfaces visible: page, extracted rules and source evidence. Emphasize space.8 at 32 px. Carry the selected component reference into its anatomy and consumers.

Voiceover draft

Read the design language behind the page. Compare observed styles with DESIGN.md and tokens, then approve the constraints that should guide the work.

Inspect component anatomy

Break it down into components.

Illustrative UI · Fictional project · Not a live execution

What happens

Locate ActionLink inside Intro. Show its label, icon, declared states and two illustrative consumers. Keep the existing shared control and change its parent spacing only.

Camera & transition

Track the selected page control into its component view. Reveal source, inputs and consumers without floating objects. Return to the parent layout with the proposed spacing adjustment highlighted.

Voiceover draft

Trace controls to their components, inputs and consumers. Reuse the shared parts where they fit; change only the layout that needs attention.

Preview the exact adjustment

Review details — Northstar

Foundation v1 · Approved in this concept

See exactly what changes.

~~16 px~~ → 32 px

```
Intro.tsx → copy-to-action gap
--space-4 → --space-8
```

Included in this change

- ✓ Intro layout spacing
- ✓ Desktop and phone verification

Keep as-is

Wording, imagery, navigation and the shared ActionLink component.

Confirm candidate 1 and this scope before the configured coding agent runs.

Confirm scope & prepare change

Other findings remain open.

See exactly what will change.

Illustrative UI · Fictional project · Not a live execution

What happens

Display the proposed 32 px spacing on the same Intro, with 16 → 32 px and the token reference. Explicitly retain wording, imagery, navigation and ActionLink. Confirm the candidate and scope.

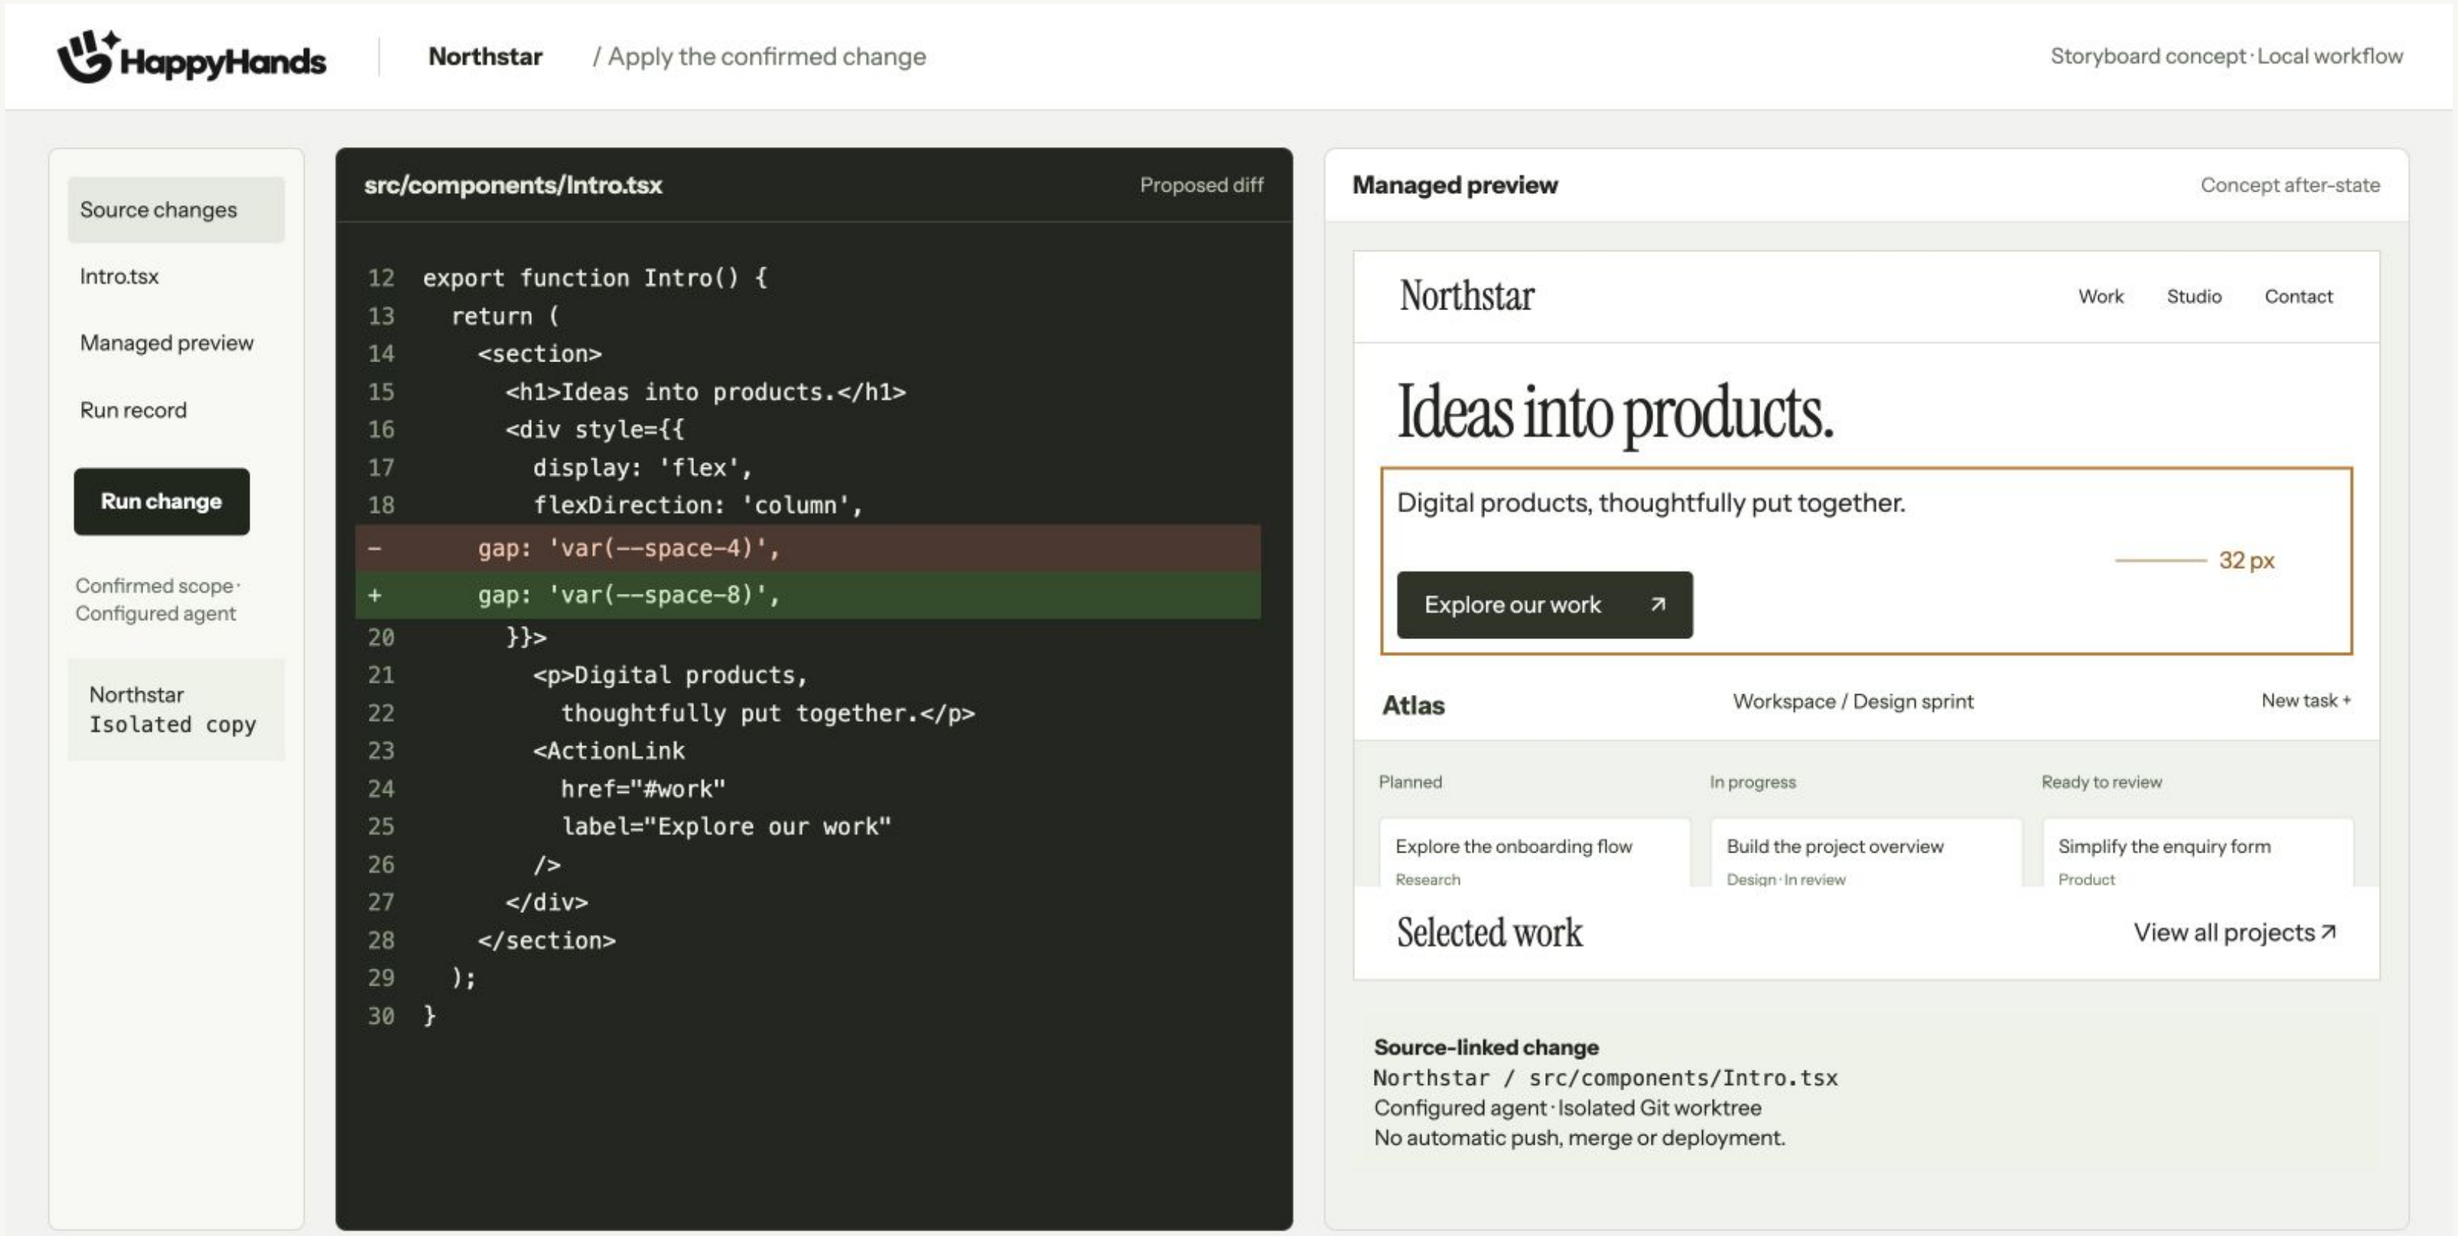

Camera & transition

Hold the before value and proposed value beside the rendered adjustment. Keep one main confirmation action. The approved token change match-cuts into the source diff.

Voiceover draft

Preview the adjustment before code changes. Confirm the spacing, the source token and the boundaries: keep the content, imagery, navigation and shared control.

Apply the confirmed change

Turn the decision into code.

Illustrative UI · Fictional project · Not a live execution

What happens

Show the configured agent stage, isolated Git copy, Intro.tsx diff and source-linked managed preview. Change --space-4 to --space-8 in the parent layout.

Camera & transition

Keep the code diff and page result side by side. Follow the selected line into the visible spacing change. Lock the preview state and split it into matched before and after evidence.

Voiceover draft

Run the confirmed change with the configured coding agent in an isolated copy. Inspect the exact source diff and the matching managed preview.

Compare and keep the record

HappyHands | **Northstar** / Compare and keep the record — Storyboard concept · Local workflow

Compare the same page state

Matched capture plan: Desktop 1280 × 800 · Phone 390 × 844 · Intro action + page context

Review details

Northstar

Review the difference.

Selected change	**Intro spacing**
Code change	**1 source file**
Other candidates	**2 still open**

Independent review

Read matching captures and interaction evidence before deciding. No real Northstar QA verdict is claimed.

Human decision

Request revision | Accept

Awaiting your decision.

Same run, full context

Source → evidence → change → review

```
run / northstar-demo
View the same record ↗
```

Review the difference.

Illustrative UI · Fictional project · Not a live execution

What happens

Compare the same rendered Intro state at the same scale. Show 16 px before and 32 px after, the planned desktop/phone checks, independent review boundary and pending human decision. Retain the same run record.

Camera & transition

Use a fixed before/after composition; the page stays primary while the review panel explains the next human action. End with the real HappyHands logo in the same workflow context, not a separate promotional card.

Voiceover draft

Compare matching page states and inspect independent review. Accept the change or request revision, with source, evidence and decisions kept in the same record.

Brand, type and capability boundaries

Official identity

Use the original HappyHands hand-and-wordmark artwork. The HTML/CSS scene compositions use the repository logo asset without changing its proportions.

Typeface roles

Instrument Sans Regular and Bold: exact loaded files for HappyHands film captions, controls and the review page. Instrument Serif Regular: display only inside the fictional Northstar project. Both use included OFL notices. All UI lettering is deterministically typeset in HTML/CSS with the self-hosted fonts.

Truthful demonstration

The scene imagery, code and pixel labels are illustrative. Before showing executed or verified outcomes in the finished film, replace them with a real scoped sample and its Harness evidence. Model candidates require confirmation; Foundation approval and human acceptance are separate decisions.

Current execution boundary

The public website carries project/task/source paths into the local workbench; it does not execute coding agents in the cloud. Codex CLI and Claude Code CLI are registered adapters. Captures cover declared states and viewports, not every unseen route.

Approval boundary

This deliverable is a static 85-second storyboard and narration draft. No video, sound, target-project edit, acceptance or production deployment is included.
